

## GTG – a route to jobs in the future!

GTG offers a special technical programme that includes industrial, general and social sciences, plus workplace training at leading industrial companies. You obtain an extra broad and in-depth technical education corresponding to the high requirements set by today's labour market, industry, and institutes of advanced studies. The school is a company and is owned and run by AB Volvo and Volvo Personvagnar AB, together with the City of Göteborg.

### Two teaching centres

The training is basically held at our two teaching centres: Lindholmen and Volvo Torslanda, in well-adapted and modern premises. Here you will find the teaching methods and technical competence required to give you an education on a world-class level.

### High tempo - personal responsibility

GTG offers you an interesting and varied education, but one, which is also demanding. At GTG the study tempo is higher than in other upper secondary programmes, from 3,100 to up to 3,800 points as opposed to the normal 2,500 points.

### A lot of Workplace training

Working life integration is a subject on the timetable, the basis of which is co-operation and integration with AB Volvo and Volvo Personvagnar and if possible other companies.

Workplace training is an important part of the subject Working life integration and covers a total of over 20 weeks during the three years. Workplace training provides a unique opportunity to obtain a picture of modern, high-tech industrial production and organisation as it goes on in different workplaces.

We have several students reading a Telematics profile. They will have periods of workplace training week 3 to 6 in 2005 and also during the autumn of 2005.

If you and your company are interested in taking on a student for workplace training, or if you would like more information, please contact Maria Hassel T.031-7603470.
